

Hippo Procurement

Building the Trade Infrastructure for West Africa

Starting with procurement. Expanding through data, distribution and operations.

Nigeria • Ghana • 2026

SMEs Pay More, Wait Longer, and Still Run Out of Stock

High Costs

30-60% markup
from intermediaries

Slow Supply

30-90 day
clearance cycles

No Control

Stock-outs and
lost sales

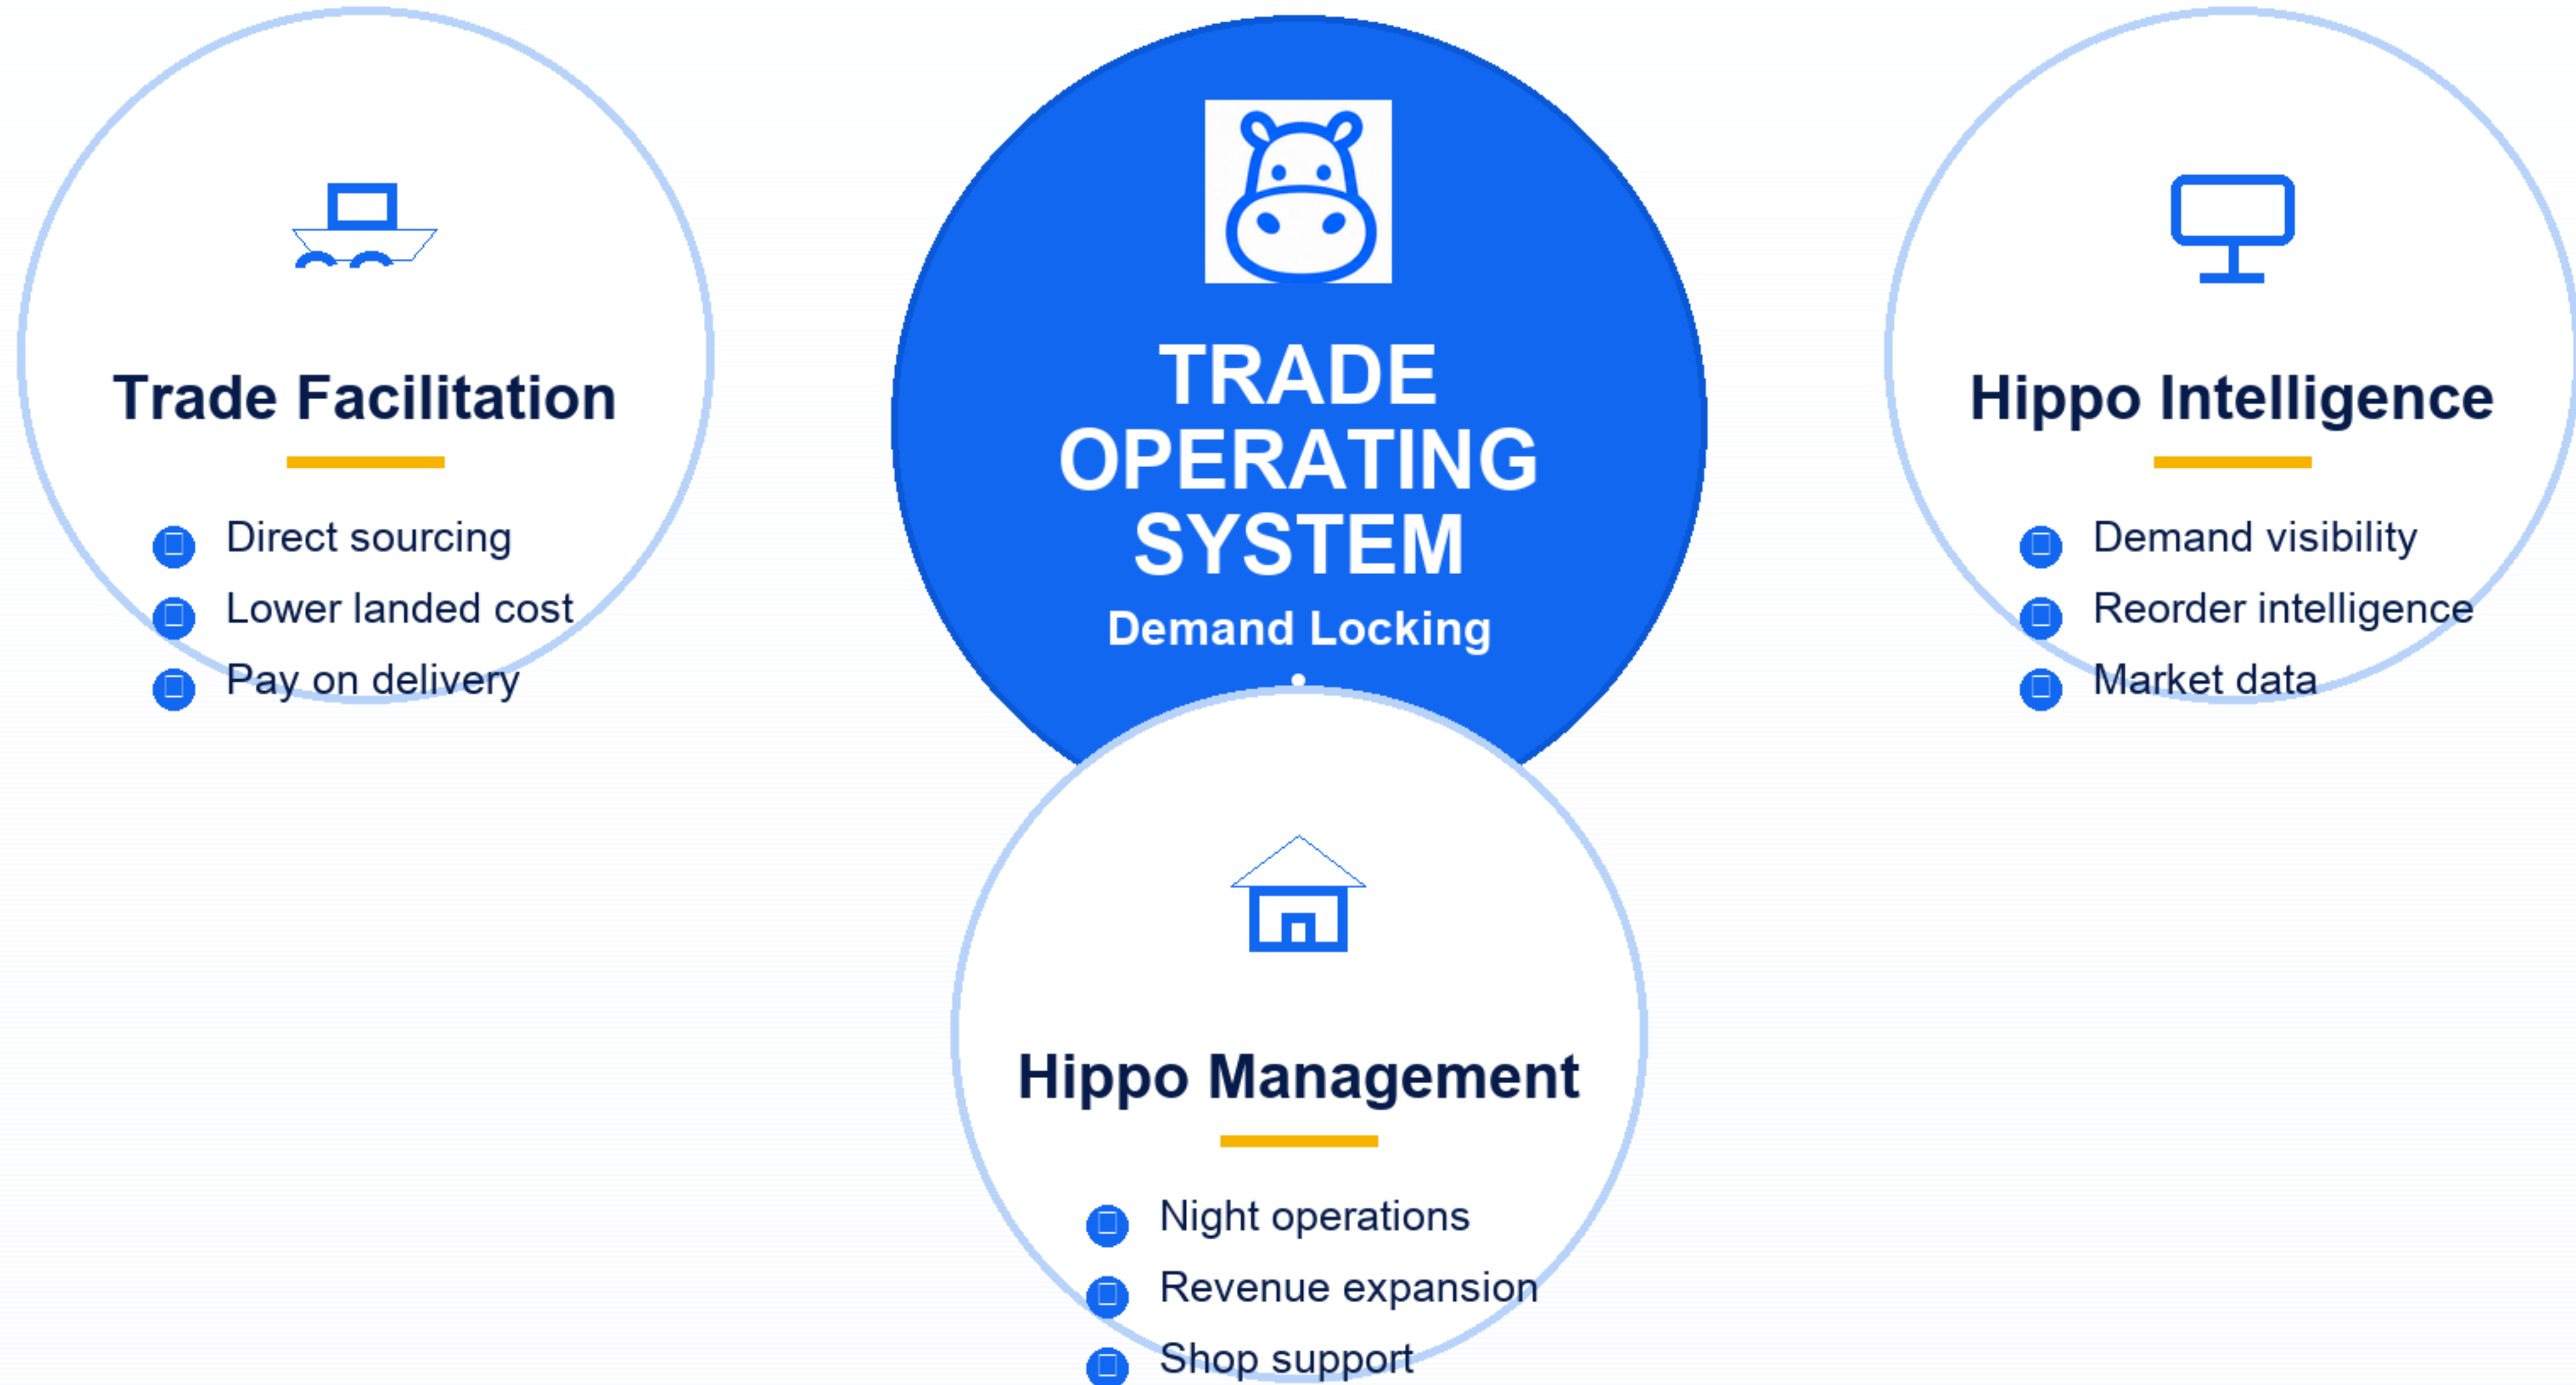

The system is broken at every layer

A Fragmented Supply Chain with No Coordination

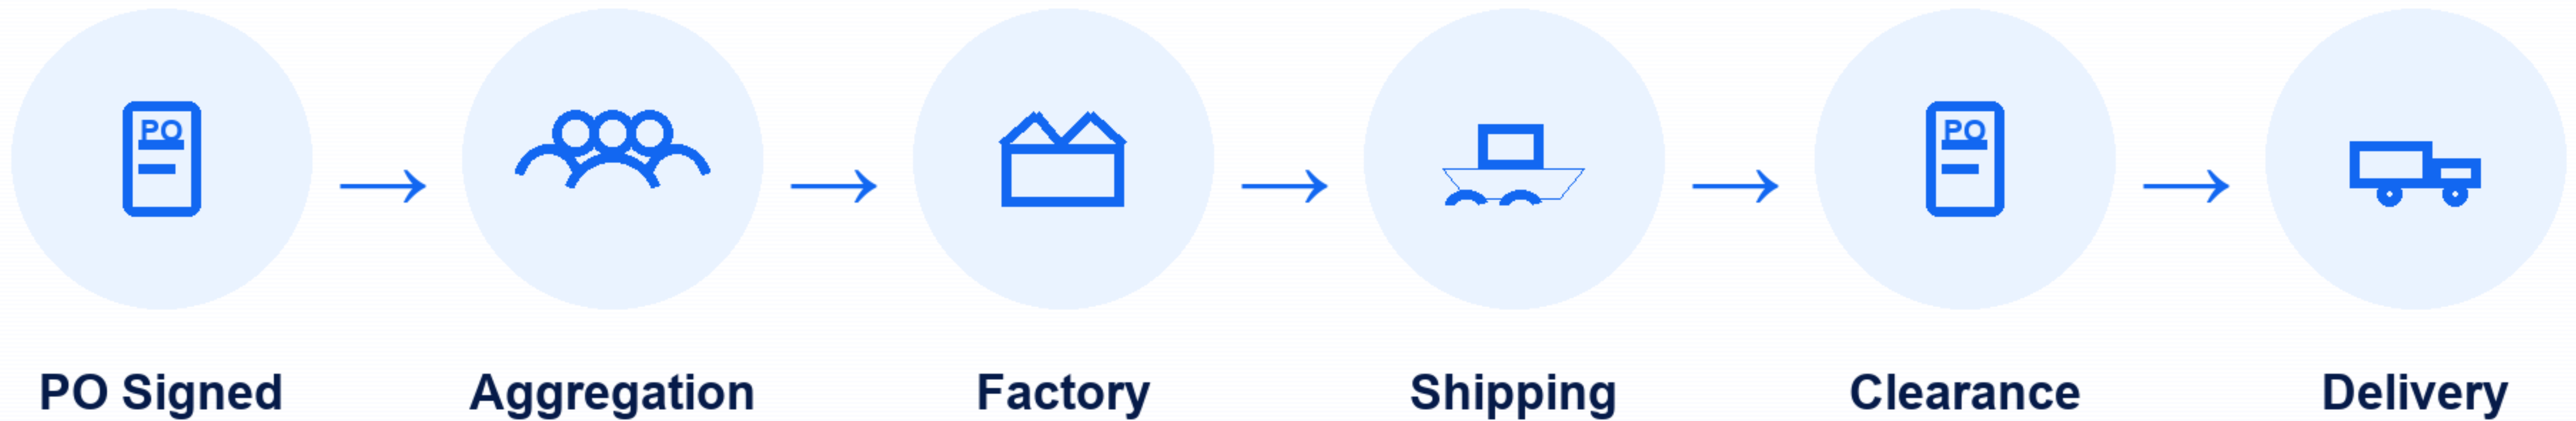

Too many layers. No shared demand signal.

Hippo: A Trade Operating System

From Factory to SME — Simplified

———  Orders secured before import ———

We Don't Guess Demand — We Lock It

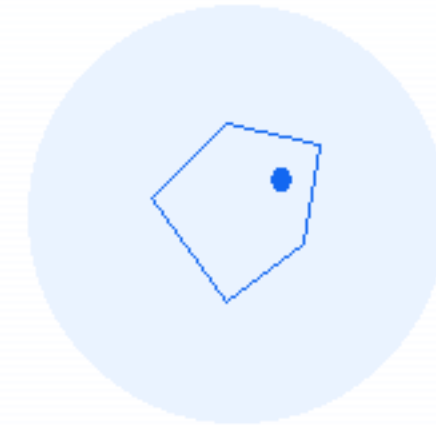

This is what makes the model scalable

A Large, Fragmented, Import-Dependent Market

\$500M-\$700M
market

95%
import dependency

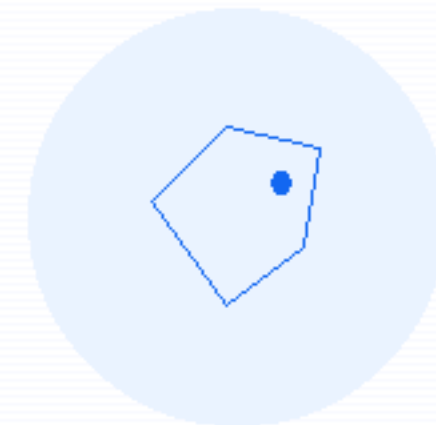

40M+
SMEs

High-frequency demand

Fragmented supply

Price-driven buyers

Multiple Revenue Streams, One Trade Infrastructure

Transaction Revenue

Trade Facilitation

7-15% commission

Recurring Revenue

Scaling a Proven System

**Hippo does not trade goods.
We control the system that moves them.**

Trade infrastructure for West African SMEs
